**Cholesterol Down** Janet Bond Brill, PhD, RD, LDN 2009-01-21 Take control of your cholesterol with this 10-point plan from nutrition and fitness expert Dr. Janet Brill—without using drugs. If you are one of the nearly 100 million Americans struggling with high cholesterol, then Dr.

Janet Brill offers you a revolutionary new plan for taking control of your health—without the risks of statin drugs. With Dr. Brill’s breakthrough Cholesterol Down Plan, you simply add nine “miracle foods” to your regular diet and thirty minutes of walking to your daily routine. That’s all. This straightforward and easy-to-follow program can lower your LDL (“bad”) cholesterol by as much as 47 percent in just four weeks. Cholesterol Down explains Dr. Brill’s ten-point plan as well as the science behind it. You’ll learn how each miracle food affects LDL cholesterol and how the foods work together for maximum effect, as well as:

- How eating whole grains helps reduce LDL cholesterol in your bloodstream
- Why antioxidants keep plaque from building up in your arteries
- How certain steps change the structure of LDL cholesterol particles (and why it’s best for them to be large and fluffy)
- Why walking just thirty minutes a day lowers “bad” cholesterol and cuts dangerous belly fat

With everything you need to stay focused on the plan, including a daily checklist, a six-month chart for tracking LDL cholesterol changes, tools for assessing your risk level for cardiovascular disease, sample weekly menus, and even heart-healthy recipes, Cholesterol Down is the safe and effective alternative or complement to statin drugs.

Improving Diagnosis in Health Care National Academies of Sciences, Engineering, and Medicine 2016-01-29 Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to Improving Diagnosis in Health Care, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. Improving Diagnosis in Health Care a continuation of the landmark Institute of Medicine reports To Err Is Human (2000) and Crossing the Quality Chasm (2001) finds that diagnosis-and, in particular, the occurrence of diagnostic errors-“has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of Improving Diagnosis in Health Care contribute to the growing momentum for change in this crucial area of health care quality and safety.
